

## **ABSTRACT OF THE DISCLOSURE**

A document processing apparatus has a control section. The control section determines that at least some of a plurality of colors contained in input document data are a determined color group, determines at least one set of confusion colors of the colors contained in the determined color group based on confusion color information defined in association with color blindness of a human being in a predetermined color component space, and performs predetermined process for portions of the colors contained in the determined confusion color set, in the input document data.
